

My name is Andrea Steel. I was born and raised in Germany and moved to San Diego at age 21 to study mathematics at SDSU. Shortly after arriving, I met my husband and chose to make San Diego my home. We have five wonderful children and five grandchildren.

I was fortunate to have exceptional math teachers throughout high school, and their influence inspired me early on to pursue a career in mathematics education. I began teaching at SDSU as a graduate teaching assistant while completing my master's degree. Since then, I've taught at SDSU, Mesa College, Grossmont College, SCY High School, and Torah High School.

In recent years at Torah High, I have taught AP Calculus AB, AP Calculus BC, and Statistics. The students are incredibly dedicated and hardworking, and teaching them has been a truly rewarding experience.
